## 1 PROBLEM

Evaluate the following determinant

$$\begin{vmatrix} a-b & b-c & c-a \\ b-c & c-a & a-b \\ c-a & a-b & b-c \end{vmatrix} = 0 \quad (1.0.1)$$

## 2 SOLUTION

$$\text{Let, } |\mathbf{A}| = \begin{vmatrix} a-b & b-c & c-a \\ b-c & c-a & a-b \\ c-a & a-b & b-c \end{vmatrix} \quad (2.0.1)$$

Applying row transformation in above determinant we get,

$$\begin{vmatrix} a-b & b-c & c-a \\ b-c & c-a & a-b \\ c-a & a-b & b-c \end{vmatrix} \xrightarrow{R_1 \leftarrow R_1 + R_2 + R_3} \begin{vmatrix} 0 & 0 & 0 \\ b-c & c-a & a-b \\ c-a & a-b & b-c \end{vmatrix} \quad (2.0.2)$$

From equation (2.0.2) one of the row of  $|\mathbf{A}|$  is zero

$$\Rightarrow |\mathbf{A}| = 0 \quad (2.0.3)$$
